

MATLAB-Simulink Based Project Topics:

1. real time based face detection using PCA method
2. Number plate recognition with odd even system system.
3. Correlation based currency detection system.
4. density based traffic light control system with object detection method.
5. speech recognition system.
6. joystic based eye exercise system with arduino and matlab software.
8. finger print sensor interfacing with matlab using R305 module and arduino.
9. Surveillance based robot control system.
10. GUI based image processing and noise removing system.
11. bit error reduction in digital communication system.
